ABOUT CONCRETEx SA

NATURE OF OUR BUSINESS

Concretex SA manufactures precast concrete infrastructural products in Berlin Industrial, East London, Eastern Cape. Concretex SA is in the process of expanding and creating an extensive network of factories throughout South Africa. Concretex SA can design and manufacture special products. This is made possible through the technical expertise and quality controls the company has in place after many years experience in the pre-cast concrete field.

Concretex SA has developed the mobile plant concept, which involves the manufacture of products on site in order to minimize transport costs. Although the products are not manufactured in the "factory environment", the attention to quality is not neglected. The SABS guidelines to product quality and manufacture are adhered to, and where possible, the "Standardization Mark" will be applied to the products.

Vision & Mission

MISSION :

To enhance quality of life through engineering and manufacturing high quality precast concrete infrastructural products.

VISION:

To be the Number 1 precast concrete infrastructural product specialist in Southern Africa.

OPERATING PHILOSOPHY:

- Customers
- People – recruit, retain, develop and look after (HSE)
- Operating efficiency (low cost production)
- Innovation
- Brand development

Concrete SA Training Academy (CTA)

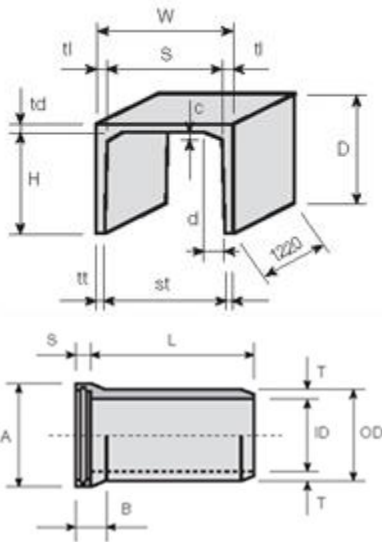

The CTA was established to effectively keep our many customers informed of the latest developments in our product range, as well as ensuring the correct procedures to follow in the specification, purchase, use and installation of these products. Seminars, factory tours, practical demonstrations and on-site instruction are held nationally. The Academy is also widely served for the transfer of skills to Emerging Contractors, recently qualified Consulting Engineers and or foreman or site managers.

CIVIL ENGINEERING ROAD CONCRETE PRODUCTS

The Concretex SA Precast Concrete Road building products that seek to create an innovation, easy to work with products that can withstand the harsh environment of Southern Africa.

STORMWATER PIPES AND CULVERTS

Concretex SA is proud a range of sizes of concrete pipe and culverts suitable for the conveyance of stormwater, with ability to withstand the load stress road infrastructure must handle.

KERBING AND CHANNELLING

Concretex SA provides multiple solutions with the capacity to manufacture quality kerbing and channeling in the factory and on site. Concretex SA strives to use quality materials that limit the effects of the environment on the products.

READY MIX CONCRETE

Concretex SA has quality and a medium sized fleet of ready mix trucks. With the ability to setup mobile batching plant virtually any where in the country where quality resources can be mined to produce quality concrete.

BUILDING CONCRETE PRODUCTS

BLOCK, BRICK AND PAVERS

The Concretex SA Precast Concrete Building products that are specialized and design unique to the customer.

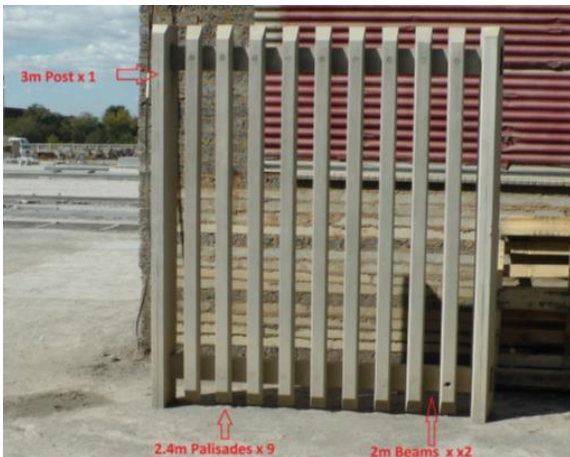

PLAIN VIBRACRETE WALLING

Precast panel 'Vibracrete' walls technology has been perfected by Concretex SA to provide a stronger, lighter support for pre-cast walls.

CONCRETE PALISADE FENCING

Concretex SA palisade fencing provides increased security and high visibility.

Concretex SA has a block, brick and paver making plant. The block making plant can manufacture up to 10,000 blocks per day.

ABT HOUSING UNITS

Concretex SA has the capacity for producing Alternative Building System. The Concretex SA ABT System is a modular building technology using custom lightweight concrete panels. These are assembled as required, allowing for the system to adapt to customer requirements. The resulting homes are constructed quickly and of high quality components.

SANITATION:

The Concretex SA Precast Concrete Toilet unit is a cost effective solution to one of the essential needs in South Africa's high-density urban and rural communities.

GREASE AND OIL SEPARATORS

Concretex SA is proud to announce the introduction to South Africa of a vast and superior range of separators, filters and purifiers for Grease, Oil and Petrochemical contamination of water.

WATERBORNE AND POUR FLASH LEACH PIT TOILET

This sanitation technology was accepted by all surveyed users in schools and households because the toilets were convenient, hygienic, free from bad smells and flies. The pour flush toilet had a positive impact on the quality of life of the users; it contributed to the improvement in health, hygienic practice and reduced absenteeism for adolescent girls because they had access to sanitary toilets that offered privacy.
